

California Agricultural Overview

1998

California's Gross Cash Income Drops 6%

Agricultural production and gross cash income in 1998 declined to \$25.9 billion, 6 percent below the previous year. Cash receipts from farm marketings totaled \$24.6 billion, also down 6% from 1997; other farm related income totaled \$1.28 billion. Of the total gross income, livestock and poultry comprised 26%; fruit and nuts, 25%; vegetables, 23%; field crops, 11%; nursery, greenhouse products, and Christmas trees, 10%. Livestock and poultry cash receipts jumped 8%, due entirely to an 18% increase in milk and cream receipts. Fruit and nut receipts decreased 16% to \$6.52 billion; vegetables declined 5% to \$5.91 billion; field crops dropped 15% to \$2.86 billion; and nursery and greenhouse products declined 3% to \$2.48 billion.

Notable increases in marketings were as follows: Bushberries, +32%; strawberries, +14%; grapefruit, +98%; kiwifruit, +49%; Freestone peaches, +26%; plums, +29%; asparagus, +35%; snap beans, +15%; broccoli, +17%; chickens, +33%; milk and cream, +18%.

Significant decreases in marketings occurred in: cottonseed, -48%; hay, -23%; oats, -38%; wheat, -30%; almonds, -40%; apples, -23%; cherries, -62%; olives, -38%; Clingstone peaches, -21%; pecans, -29%; prunes, -29%; tangerines, -45%; walnuts, -40%; garlic, -36%; lettuce, -24%; hogs, -42%; sheep and lambs, -35%, and wool, -27%.

California Farm Facts

About 12.1% of the national gross cash receipts for farming is produced in California on 89,000 farms.

This constitutes 4.1% of the Nation's total farms (based on the 1997 Census of Agriculture definition of farms as places with annual sales of agricultural products of \$1,000 or more).

Some 350 crops are recognized in California, including seeds, flowers and ornamentals. This directory contains information about 62 major crops grown on a large commercial scale in California:

13 Field Crops,
25 Fruits and Nuts,
22 Vegetables and Melons,
Nursery Products and Cut Flowers

In addition, data are shown for 11 livestock, poultry, and other products.

California's top twenty crop and livestock commodities account for 77% of the State's gross farm income. A large number are specialty crops in which the Golden State accounts for most of the U.S. production.

California's Diversity

California agriculture is considered one of the most diversified in the world, with no one crop dominating the States's farm economy. This is illustrated by the fact that only one product, milk & cream, exceeds 10% and that five leading commodities account for 42% of the States's total gross farm income. California is the number one dairy state and continues to lead the Nation in the production of many other commodities, such as fruit, nuts, and vegetable crops. These crops account for over half of the Nation's production.

El Nino Weather takes its Toll on Crop Production

The Golden State experienced another El Nino year (July 1997-June 1998). The El Nino storms held off until January 1998, but raised havoc on a number of crops. Particularly hard hit were the coastal valleys, which remained wet for the first half of 1998. Results of the rain were delayed planting, damaged produce, and high supermarket prices for California vegetables. In the Salinas Valley, lettuce and broccoli were in short supply, while the strawberries turned mushy in Monterey and Santa Cruz counties.

Roads and bridges were washed out and levees were threatened or breached as rivers peaked and the rain kept falling. Precipitation records were broken all over the State as the Central Valley spring began to emerge. Producers had a difficult time getting in their fields because of the extremely wet soil. Normal cultural practices, such as spraying, pruning, and tying vines were delayed. Temperatures during January and February were generally above normal and many of the deciduous fruit and nut crops did not receive the desired chilling degrees necessary for good crop dormancy. Almonds and early stone fruit trees were in bloom during February and March, but the bees had difficulty pollinating. Standing water delayed spring planting of tomatoes and field crops. Fungal problems abounded in orchards and vineyards. Stone fruit trees suffered damaged roots from totally saturated soils, while windrowed alfalfa molded. Dairy cows were miserably wet resulting in loss of milk production. Delays to rice planting and development were nearly unprecedented.

As spring progressed, the rain and cool weather continued and most crops were slow to develop. Cherry growers lost most of their fruit due to splits because of the rain. Some cotton fields remained too wet to be planted in time to grow a crop. Many planted cotton fields were plowed under for failure to thrive. As summer arrived, warmer weather hastened crop maturity, but most crop development was one to two weeks later than normal. Stone fruit suffered from brown rot, mold, and split pits. Bunch rot became a concern to table grape growers. Very high temperatures in August caused sunburn damage to walnuts. The quality of many crops was below normal. Most crops developed late, but the weather during the fall remained open and a majority of crops were harvested without any significant weather problems.

Crop and Livestock Commodities in which California Leads the Nation

Alfalfa Hay	Chinese Cabbage	Ladino Clover Seed	Pomegranates
Alfalfa Seed	Chinese Peas	Lemons	Potted Flowering Plants
Almonds	Crenshaw Melons	Romaine Lettuce	Prunes
Apricots	Currants	Leaf Lettuce	Rabbits
Artichokes	Cut Flowers	Head Lettuce	Raisins
Asparagus	Dates	Milk	Safflower
Avocados	Dry Baby Lima Beans	Mustard Greens	Small Grain Hay
Bedding Plants	Dry Large Lima Beans	Nectarines	Spinach
Bell Peppers	Endive	Nursery Crops	Strawberries
Bermuda Grass Seed	Figs	Olives	Sudan Grass Seed
Blackeye Beans	Garbanzo Beans	Onions	Sweet Rice
Broccoli	Garlic	Oriental Vegetables	Table Grapes
Brussels Sprouts	Goat's Milk	Parsley	Processing Tomatoes
Bulbs	Green Onions	Peaches (Clingstone)	Vegetable & Flower Seed
Cantaloupes	Greenhouse Vegetables	Pears, Bartlett	Walnuts
Carrots	Herbs	Persian Melons	Watermelon
Casaba Melons	Honey	Persimmons	Wine Grapes
Cauliflower	Honeydew Melons	Pigeons & Squabs	
Celery	Kale	Pistachios	
Chicory	Kiwifruit	Plums	

California is the sole producer (99% or more) of the commodities in bold.

1/ A positive value of inventory change represents current-year production not sold by December 1. A negative value is an offset to production from prior years included in current-year sales.

2/ Final sector output is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

1/ Based on quantity produced for crops and on quantity marketed for livestock and poultry products.

2/ Based on value of quantity harvested for crops, value of quantity marketed for livestock and value of quantity produced for poultry products.

3/ Based on values published in the Annual County Agricultural Commissioners' Reports.

4/ Share of U.S. production based on 1997 Census of Agriculture.

5/ The 1998 price and value are based on the 1997 California average price.

6/ Extracted from Agricultural Commissioners' Annual Crop Reports.

7/ Includes Sunflower, Safflower, and Canola.

8/ Includes trees, shrubs, vines, bulbs, turf, etc., not included in flowers and foliage category.

9/ Includes cut flowers, potted plants, foliage plants, bedding plants and indoor decoratives.

California's Farm Numbers and Size, 1950-98

Year ^{1/}	Number of Farms	Land in Farms		Average Size of Farm
		1,000 Acres	Acres	
1950	144,000	37,500	260	
1955	124,000	39,000	316	
1960	108,000	38,800	359	
1965	82,000	37,800	461	
1970	64,000	36,600	572	
1975	73,000	34,300	470	
1980	81,000	33,800	417	
1985	79,000	32,900	416	
1986	79,000	32,800	415	
1987	83,000	31,900	384	
1988	84,000	31,600	376	
1989	84,000	31,300	373	
1990	85,000	30,800	362	
1991	83,000	30,500	367	
1992	82,000	30,200	368	
1993	85,000	29,900	352	
1994	85,000	29,600	348	
1995	86,000	29,300	341	
1996	86,000	29,000	297	
1997	87,000	28,700	330	
1998	89,000	28,300	318	

^{1/} Until 1950 the definition of a farm was: Places of 10 or more acres that had annual sales of agricultural products of \$50 or more and places of less than 10 acres that had annual sales of \$250 or more. Starting in 1975 the new definition of a farm is: Places with annual sales of agricultural products of \$1,000 or more.

CALIFORNIA FIELD CROPS

Summary of Field Crops

California's 1998 field crop production was worth \$2.99 billion at the farm-gate level. This value was 21% below the previous year.

In 1998, all field crops recorded lower returns from the previous year with the exception of Durum wheat, which showed a 40% increase in value. Barley acreage declined 17%, production was down 12%, and the value was down 28%. Dry edible bean returns were down 23%, while the harvested acreage was off 21%, and production was down 32%. Corn returns were down 23% due mostly to lower corn prices. Upland cotton returns dropped 47%. A 29% drop in harvested acreage, with lower yields and prices, attributed to the lower value. Fewer acres of harvested rice and lower yields resulted in a 23% decline in production with a 21% reduction in value.

Winter wheat farm returns were down 34% from the previous year, while Durum wheat returns were up 40%. Winter wheat acreage showed a 5% decline, while Durum acreage was up 22%.

The average value per harvested acre in 1998 decreased to \$584 from the \$715 per acre value in 1997. Production of the major field crops totaled 28.8 million tons, down 3% from the 29.6 million tons produced in 1997.

Hay was the State's highest valued field crop with a total of \$802 million. Nationally, California ranked second in all hay production with 8.12 million tons produced at an average price of \$101 per ton.

Upland cotton was California's second leading field crop with a total value of \$409 million. At the U.S. level, the State ranked fifth in production with a total of 1.15 million bales produced.

Field Crop Acreage, Production and Value, 1989-98

1/ Production is on a clean basis.

2/ Dashes represent data not published due to the estimate being discontinued, not estimated, or not available.

3/ Included in "Beans, Other Dry."

4/ Includes varieties not listed separately. Excludes beans grown for garden seed.

5/ Cotton bales are 480 lbs. net-weight.

6/ Estimated marketings of alfalfa and other hay used as weights to calculate all hay price for 1989-98.

7/ Excludes sweet and wild rice.

8/ Includes some acreage carried over and harvested the following spring.

California Floriculture

Summary of California Floriculture

Floriculture is one of the fastest growing segments of U.S. agriculture. All states have commercial growers, but production is concentrated in the southern and western states, mostly due to climate factors. Floriculture includes cut flowers, cultivated greens, potted foliage and flowering plants, bedding and garden plants. These crops are typically grown under cover such as plastic or greenhouses.

California's total value of sales at wholesale for floriculture fell 4% from \$767 million in 1997 to \$740 million in 1998. California is the leading floriculture state accounting for 21% of the 1998 U.S. value.

California produces approximately 64% of all U.S. grown fresh, cut flowers. The Golden State's dominance of the cut flower industry is mainly due to its favorable coastal climate that allows year-round production of flowers and cut greens. Other leading flower-producing states are Florida, Colorado, and Hawaii. California's leading flower-producing counties are Ventura, Santa Cruz, Santa Clara, Santa Barbara, San Luis Obispo, San Diego, and Monterey. Most flowers are purchased during four key-holiday months: February, April, May, and December. The rose is the most popular cut flower in the nation, with California producing roughly 70% of all fresh, cut roses grown in the U.S. Cut flower demand has continued to rise, however, domestic production has been declining with about two-thirds of the major cut flowers now imported. Most of the imports come from Columbia, Ecuador, Netherlands, Costa Rica and Mexico. From 1997 to 1998, California's value of cut flower sales declined 13% from \$308 million to \$267 million.

Sales of potted flowering plants crept up 1% from \$145 million in 1997 to \$146 million in 1998. Sales of foliage plants gained 3% from \$86.8 million to \$90.4 million.

Bedding and garden plants value of sales at wholesale increased 2% from \$212 million to \$217 million. Values for cut cultivated greens were up more than \$3 million from \$16.5 to \$19.8 million.

Floriculture Production and Value, 1997 1/

TOTAL ALL PLANTS 5/	1,210	—	—	—	—	—	—	767,166

1/ The total covered growing area of 139,778,000 square feet consisted of the following: 19,610,000 square feet of shade and temporary cover; 15,693,000 square feet of glass; 45,021,000 square feet of fiberglass and other rigid greenhouses; and 59,454,000 square feet of film plastic (single/multi) greenhouses. In addition, plants were produced on 9,386 acres of open ground.

2/ For potted plants, price represents a weighted average for plants sold in pots less than 5 inches and in pots 5 inches or more.

3/ Total includes Gladioli, which are not published to avoid disclosure of individual operations.

4/ Total includes Leatherleaf Ferns, which are not published to avoid disclosure of individual operations.

5/ Based on equivalent wholesale value of all sales for all crops, except potted foliage plants which are based on net value of sales.

FRUIT AND NUT CROPS

Summary of Fruit and Nut Crops

California produced 13.9 million tons of fruit and nut crops in 1998, 12% less than in 1997. The Golden State grew 39% of U.S. fruit and nut production in 1998, down from 43% in the previous year. The total value of fruit and nut production was \$6.50 billion in 1998, down 16% from 1997. This was 58% of the U.S. total value. Record values of production were set for avocados, all oranges, and strawberries. The top value fruit and nut crops in California in 1998 were grapes at \$2.40 billion, strawberries at \$783 million, and almonds at \$669 million. California accounts for nearly all of the U.S. production of dates, figs, kiwifruit, nectarines, olives, almonds, pistachios, and English walnuts.

California dominates U.S. production of apricots, avocados, grapes, lemons, plums, prunes, and strawberries. Several crops had major changes in production from 1997 to 1998. They include the following changes: apples, down 15%; cherries, down 69%; grapes, down 19%; plums, down 24%; prunes, down 48%; almonds, down 32%; pecans, down 43%; and walnuts, down 16%. Only dates, kiwifruit, grapefruit, oranges, pistachios, and strawberries increased production.

Precipitation during the winter and spring months was well above normal, which hampered cultural activities. Temperatures in January and February were generally above normal and many of the crops did not receive the desired chilling degrees necessary for good crop-dormancy. Extremely wet and windy weather in February raised havoc for growers. Pruning, spraying, and tying vines were among the cultural activities that were delayed. Almonds and the early stone fruit trees were in bloom, but the bees had difficulty pollinating. Many growers could not enter their orchards due to the extremely wet soil. March was a much drier month and this allowed growers to catch up on their cultural activities in orchards and vineyards. By the end of the month, most of the trees were past bloom and leafing out. April was also fairly dry, which helped speed the maturity of the stone fruit crops. Heavy rain and cool temperatures in May delayed the development of the fruit and nut crops. Cherry growers lost most of their fruit due to splits because of the rain. Almond growers were concerned about anthracnose showing up in their orchards. Some yellow leaves appeared, suggesting waterlogged roots. Strawberries also suffered from the wet weather with fungi and crop loss rampant. Many strawberries that were salvaged went for juice. Warmer weather during the summer months hastened maturity, but many of the stone fruits were plagued by brown rot, mold, and split pits. Very high temperatures in August caused sunburn damage to walnuts. The quality of most fruit and nut crops was below normal. Most crop development was late, but the weather during the fall remained open and most crops were harvested without any significant weather problems.

The citrus crops fared much better than the non-citrus fruit and nuts. The fruit quality and size were above average and good crops were realized.

NOTES FOR USERS

Total production is the quantity actually harvested, plus unharvested quantities that would have been acceptable for fresh market or processing, but were not harvested. It also includes fruit harvested, but not sold due to marketing conditions. **Utilized production** is the amount sold, plus the quantities used at home or held in storage. **Crop year production** for citrus and avocados are from the bloom of the first year shown. For example, 1997-98 would represent the 1998 production from the 1997 bloom.

Utilization refers to the first, but not necessarily final, utilization. For example, frozen fruit used for preserves is included as frozen. **Canned** includes all canned products -- jam, jelly, baby food, nectar, juice, puree, and all fruit packs combined.

The price quoted is at the packinghouse door, which includes the transportation costs. Drying costs are excluded from prices on all fruit crops, except grapes. **Crop value** estimates cover the marketing season or crop year and should not be confused with **cash receipts** from these crops, which are calculated on a single calendar year. The season average price is applied to utilized production to compute **value of production**.

Price and value for citrus fruits are based on equivalent packinghouse door returns for the entire data series. The processing price for berries is based on equivalent returns at the processing plant door. The fresh market price is on a packed and loaded basis, F.O.B. shipping point.

1/ Equivalent packinghouse door returns.

2/ Estimates for "Grapefruit, Desert" and "Grapefruit, Other" were combined to "Grapefruit, All" starting in 1995-96. Season average values for all grapefruit are derived by weighting the season average value for each area by their carton weights. Prior to 1993-94, net weight per carton for Desert Valley was 32 pounds.

1/ Return at processing plant door or packinghouse door.

2/ Acres of raisin type grapes enrolled in the California Raisin Industry Diversion (RID) program were; 1988 -- 25,000; 1991 -- 20,000; 1992 -- 12,500; 1993 -- 20,000; 1994 -- zero; 1995 -- 25,000; 1996,1997 and 1998 -- zero. These acres were deducted from bearing acres before calculating yield.

3/ Raisin type production is the fresh equivalent of dried and not dried.

4/ Total value based on grower return.

5/ Acreage by county, variety, and year of planting for 1998 are available upon request.

6/ These crops are almond hulls, black walnuts, jojobas (until 1991), limes, persimmons, pomegranates (starting in 1990), and in 1991, bushberries. Acres exclude almond hulls.

Drying Ratio -- Tons of Green Fruit Required to Produce One Dried Ton

Year	Apples	Apricots	Figs	Raisins	Peaches, Freestone	Pears, Bartlett	Prunes

1/ Dried and frozen fruit included in total processed to avoid disclosure of individual operations.

2/ Processed fruit included in fresh market total to avoid disclosure of individual operations.

3/ Total processed includes canned, crushed, frozen, and brined.

4/ For 1989-98, prices for processing and fresh totals were not published to avoid disclosure of individual operations. Small quantities processed included in fresh to avoid disclosure of individual operations.

5/ Includes substandard raisins diverted to other uses.

6/ Processed and fresh fruit not published to avoid disclosure of individual operations, but included in total utilized.

7/ Processed mostly canned, but includes other small quantities not published separately to avoid disclosure of individual operations.

1/ Excludes raisins produced from table type grapes.

2/ Missing 1998 data will be available by the end of January 2000.

CALIFORNIA LIVESTOCK AND DAIRY

Summary of Livestock Inventory and Cash Receipts

Livestock cash receipts totaled \$6.85 billion, 8% above 1997. The increase is due, almost entirely, to an 18% increase in milk and cream receipts.

Total production of the three red meat species, at 2.05 billion pounds, was 4% lower than last year's production. All cattle and calf marketings, at 2.50 billion pounds, were down 2% from a year ago. Sheep and lamb marketings of 73.5 million pounds were down 22%. Hog and pig marketings of 78.9 million pounds were 7% below a year ago.

Milk production, at 27.6 billion pounds, was fractionally higher than the previous year. Total cattle and calves marketed from California feedlots totaled 570,000 head, unchanged from 1997. Turkey production was 8% lower to 443 million pounds. Egg production, at 6.61 billion eggs, was down 1%. Honey production of 37.4 million pounds increased by 19% from the 1997 production year. Wool production of 3.60 million pounds was 5% less than 1997.

The California dairy industry continued growing as new record highs were set for numbers of milk cows, milk production and total milk value. California continues to lead the nation in milk production and it is also the Golden State's leading commodity.

Milk Cows Average Prices Received, 1989-98 1/

Year	Jan.	Apr.	July	Oct.	Annual Average
	<i>Dollars Per Head</i>

1/ Production multiplied by marketing-year average price for individual states. U.S. value is the summation of state values.

CALIFORNIA VEGETABLES AND MELONS

Summary of Vegetable and Melon Crops

California produced 22.5 million tons of vegetables and melons in 1998, 5% less than in 1997. Total value of vegetable production was \$5.88 billion, down 3% from 1997.

The Golden State continues to lead the Nation in vegetables and melons, accounting for 35% of the harvested acres, 54% of the production, and 50% of the total value. California produces more than 90 percent of the U.S. production of artichokes, broccoli, brussels sprouts, celery, and processing tomatoes. Monterey County is known worldwide for its abundant, high-quality vegetable crops, particularly, artichokes, broccoli, cauliflower, celery, and lettuce. California now produces about 95% of the processing tomatoes in the country, with most of the production coming from the rich farmland in the Sacramento and San Joaquin valleys. California's diverse agriculture and climate allow year-round production of many vegetables; coming from the desert in the winter months and then moving into the coastal areas and the central valleys as the season progresses.

Notable changes in vegetable production from 1997 to 1998 were as follows: asparagus, +11%; broccoli, +10%; garlic, -12%; head lettuce, -20%; romaine lettuce, +16%; watermelons, -14%; onions, -11%; fresh spinach, -10%, and fresh market tomatoes, -12%.

The El Nino storms began in January of 1998 and raised havoc on a number of vegetable crops. Particularly hard hit were the coastal valleys, which remained wet for the first half of 1998. Results of the rain were delayed planting, damaged produce, and high supermarket prices for California vegetables. In the Salinas Valley, lettuce and broccoli were in short supply. The wet weather during the first half of 1998 delayed field activities and many times the crops were well behind their planned schedules. Consequently, harvest was delayed and many of the vegetables had quality problems. Disease and weed problems were also more prevalent.

The vegetable and melon estimates include commercial production, but exclude garden production and vegetables grown for seed. Prices for processing crops and processed segments of dual utilization crops are based upon equivalent returns at the processing plant door.

For fresh market sales, the price is on a packed and loaded basis, F.O.B. shipping point. To avoid disclosure of individual plants, not all of California's data was published.

	1997	170,699	---	---	---	938,145
	1998	170,000	---	---	---	1,056,000

1/ The processed price is based on equivalent returns at the processing plant door. The fresh market price is on a packed and loaded basis, f.o.b. shipping point.

2/ Program initiated for 1992.

3/ Fresh market and processed acreage separated starting in 1993.

4/ Data not published for 1991.

5/ Onion production includes quantity harvested, but not marketed because of loss during storage (shrinkage): 1988 -- 280,000 cwt., 1989 -- 200,000 cwt., 1990 -- 234,000 cwt., 1991 -- 174,000 cwt., 1992 -- 275,000 cwt., 1993 -- 346,000 cwt., 1994 -- 266,000 cwt., 1995 -- 266,000 cwt., 1996 -- 292,000 cwt., 1997 -- 278,000 cwt., 1998 -- 250,000 cwt. Storage loss amounts are excluded when computing total value.

6/ Miscellaneous vegetables and melons include: Green lima beans for processing, oriental vegetables, green peas, chili peppers, squash, etc. The new crops added in 1992 are excluded from the 1992 to present miscellaneous totals. Miscellaneous figures come from County Agricultural Commissioners.
